

Security and data overview

How asasii health handles identity, roles, audit, patient data and continuity.

Identity and access

Single sign-on	With the provider's own identity provider
Multi-factor authentication	Required on every console
Roles	Access to patient records scoped to role

Audit

What is recorded	Every change to a record, with who made it
On every patient	One record, read by registration, billing, claims and the pharmacy
On every episode	The deposit, the bills, the guarantee letter and the claim, held against the same episode

Where the data lives

Environment	The provider's own data centre or cloud account
Residency	The provider's decision, not a condition of the product
Ownership	The provider owns the software outright; its team holds the keys, the backups and the data
Maintenance	idataraya installs the system and keeps it current

Patient data

Obligations	Patient data carries obligations that ordinary business data does not
Personal data	Stays in the provider's own environment, under the Personal Data Protection Act 2010
Clinical systems	Stay where they are; asasii health covers the administrative work around care

Continuity

Backup	A drilled backup and restore
---------------	------------------------------

Monitoring	Continuous, from within the provider's environment
Response	Severity-based response times, measured monthly
Moving across	The previous path stays available until the new one is trusted

Integration

Clinical systems	idataraya integrates asatii health with the systems the provider already runs
Payment terminals	Driven from the billing screen over ECR

asatii health is a product of idataraya Sdn Bhd (1263428-K), Kuala Lumpur. Deployed in the client's own environment, customised and maintained by idataraya. info@idataraya.com · health.asatii.com
